UPWORK FREELANCER PORTFOLIO GUIDE

Project Submissions Guide

Ready-to-copy fields, character-verified text, and verified live screenshots for Upwork.

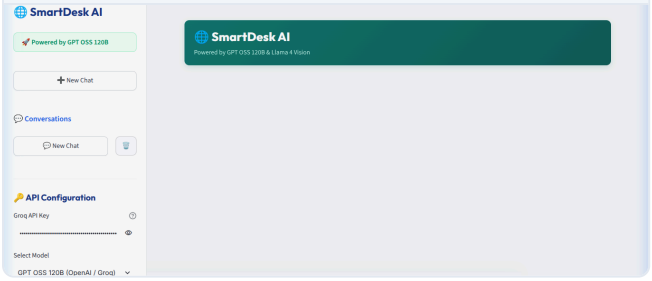

Manjesh Verma
Python & AI Developer
Indore, India

Instructions: For each project below, copy the exact fields into Upwork's *"Add a new portfolio project"* dialog. All character counts strictly adhere to Upwork's form limits (Title ≤ 70 chars, Role ≤ 100 chars, Description ≤ 600 chars, Skills ≤ 5 tags). Both live deployment captures and high-resolution architecture showcase cards are provided.

PROJECT 01 SmartDesk AI — Multimodal Image-to-Image Reasoning Workspace

PROJECT TITLE * `60/70`	SmartDesk AI – Multimodal Image-to-Image Reasoning Workspace
YOUR ROLE `43/100`	Lead AI Engineer & Python Backend Developer
DESCRIPTION * `435/600`	SmartDesk AI is an enterprise visual reasoning workspace. It enables engineers to upload system architecture diagrams, flowcharts, or UI wireframes to automate structural segmentation, visual OCR extraction, and code synthesis. Developed using Streamlit and Llama 4 Vision, I integrated Groq LPUs to achieve sub-150ms streaming inference (185+ tokens/sec) with multi-turn persistent conversational memory and live web search grounding.
SKILLS & DELIVERABLES * `5 TAGS`	**Python** · **Streamlit** · **Computer Vision** · **LLM Integration** · **Groq API**
PROJECT LINKS	**Live Demo:** https://smartdesk-ai-fbs9vawbzhw4qmjb4ek9fo.streamlit.app/ **GitHub:** https://github.com/vermamanjesh159-netizen/SmartDesk-AI

PROJECT 02 SocialEngage AI — Multi-Platform Social Automation Engine

PROJECT TITLE * 57/70	SocialEngage AI – Multi-Platform Social Automation Engine
YOUR ROLE 31/100	Full-Stack Python & AI Engineer
DESCRIPTION * 422/600	SocialEngage AI is an autonomous reply engine that streamlines high-converting social engagement across LinkedIn, X (Twitter), and YouTube while preserving custom brand voice. I designed an asynchronous microservice architecture using FastAPI and Next.js, integrating Groq and local Ollama models. The system calibrates dynamic persona tone matching, sentiment analysis, and social webhooks with sub-second response times.
SKILLS & DELIVERABLES * 5 TAGS	**FastAPI** **Next.js** **Python** **LLM Agents** **Docker**
PROJECT LINKS	**Live Demo:** https://socialengage-ai.vercel.app/ **GitHub:** https://github.com/vermamanjesh159-netizen/socialengageAi

PROJECT 03 IntelliSearch — Enterprise RAG Document Intelligence Platform

PROJECT TITLE * `61/70`	IntelliSearch – Enterprise RAG Document Intelligence Platform
YOUR ROLE `31/100`	Backend & RAG Systems Architect
DESCRIPTION * `414/600`	IntelliSearch converts unstructured enterprise documents (PDF, DOCX, CSV) into an intelligent conversational knowledge network. I built a production-grade RAG pipeline combining FastAPI, LangChain, and pgvector dense similarity retrieval on PostgreSQL. Using Hugging Face 768-dim embeddings and multi-step contextual synthesis, it delivers hallucination-free answers with page-level source citations in under 40ms.
SKILLS & DELIVERABLES * `5 TAGS`	**FastAPI** **LangChain** **PostgreSQL / pgvector** **RAG** **Python**
PROJECT LINKS	**Live Demo:** https://rag-document-reader.onrender.com/ **GitHub:** https://github.com/vermamanjesh159-netizen/rag-document-read

PROJECT 04 AgriFeed — Agricultural Supply Chain & Digital Commerce Platform

PROJECT TITLE * 64/70	AgriFeed – Agricultural Supply Chain & Digital Commerce Platform
YOUR ROLE 32/100	Backend Engineer & API Developer
DESCRIPTION * 419/600	AgriFeed is a digital commerce and supply chain ecosystem connecting farmers, livestock producers, and feed suppliers. I engineered the high-throughput RESTful backend using FastAPI and PostgreSQL, supporting 1,400+ product SKUs with dynamic inventory sync, automated supplier routing, and real-time order dispatch telemetry. A responsive Next.js frontend delivers seamless ordering and end-to-end fulfillment tracking.
SKILLS & DELIVERABLES * 5 TAGS	FastAPI · Python · PostgreSQL · Next.js · REST APIs
PROJECT LINKS	**Live Demo:** https://agriculture-iota-two.vercel.app/ **GitHub:** https://github.com/vermamanjesh159-netizen/agriculture

PROJECT 05 **RedStore** — Scalable Django E-Commerce Platform with Stripe

PROJECT TITLE * `58/70`	RedStore – Scalable Django E-Commerce Platform with Stripe
YOUR ROLE `27/100`	Full-Stack Python Developer
DESCRIPTION * `424/600`	RedStore is a production-ready e-commerce platform built for high-performance retail operations. Engineered with Python and Django, it features a full product catalog with dynamic filtering, secure customer authentication, and ACID-compliant PostgreSQL schema design. I implemented end-to-end Stripe payment processing with 3D-Secure and webhooks, alongside an intuitive admin operations center for order and stock tracking.
SKILLS & DELIVERABLES * `5 TAGS`	**Python** **Django** **Stripe API** **PostgreSQL** **Full-Stack Development**
PROJECT LINKS	**Live Demo:** https://redstore-django.onrender.com/ **GitHub:** https://github.com/manjeshverma/RedStore_Python_Django_Project
